## INTRODUCTION

DESIGN TANKS

Design Tanks, located in Sioux
Falls, South Dakota, has been manufacturing fiberglass tanks for over fifty years in the Midwest.

Although the name has changed, the faces have not. Through streamlining the manufacturing and administrative process, we are able to deliver our product to the customer quicker than ever; whether you need it in CA, TX, MN, NY, the Philippines, or any point in between.

Our in-house design staff can take care of your most difficult design specifications and provide you with the answers you require.

## RESIN SELECTION PROCESS:

- Key pieces of information for resin selection include chemical composition of contents including concentrations, operating temperature of the contents, and special requirements (ex. food grade or fire retardant).
- Design Tanks uses two bulk resin systems, an isophthalic polyester, and a vinyl ester. The isophthalic polyester is cost effective and covers a broad range of chemical environments while the vinyl ester can be used for an even environments while the vinyl ester can be used for an even
broader range of chemicals at higher temperatures and more severe concentrations.
- When one of DT's two bulk resin systems doesn't work with the chemical environment, we will utilize special-order resin systems.
- Design Tanks will work with the customer to determine the proper resin selection based on the chemical content of the tank as well as the environment the tank will be in.

- Design Tanks works closely with the resin manufacturers to choose the most suitable resin which will result in the longest service life for the tank. This includes using Design Tank long history of experience
and the resin manufacturers knowledge in order to know how to work with the specific resin system to finish with the highest quality product.
- Whichever resin

system is chosen, it
will be used for all fiberglass parts in the tank including the tank wall, flanges, and all fiberglass parts inside the tank.

## CENTRIFUGAL CASTING - THE PROCESS

Originally pioneered more than five decades ago as a method to construct high performance gondolas for atmospheric test balloons, the centrifugally cast process developed into and remains one of the most versatile and economical methods of producing high-quality fiberglass tanks. It provides all of the mechanical strength necessary for liquid storage plus the superior chemical resistance capability of a high resin-to-glass ratio wall construction.

By utilizing centrifugal force to combine resin and glass, the process provides tanks with a dense uniform wall laminate capable of a $70 \%$ resin content. For all practical purposes, the entire wall becomes a resin-rich, chemicalresistant barrier that can be custom designed for specific requirements ranging from the storage of corrosive chemicals such as hydrochloric acid and sodium hydroxide to food grade applications.

The spin cast tank is produced inside a smooth metal cylinder. First the end section, which is sprayed up in a separate mold, is inserted into the cylinder at a point determined by tank capacity. This flexibility allows us to manufacture a variety of sizes without changing tooling. For example a 32" diameter tank can be made to hold any capacity between 100 and 300 gallons by adjusting the distance that the head is placed into the mold.

End section is inserted into position determined by desired capacity.

After the end section has been located, sidewall construction begins by applying a 10 to 15 mil layer of resin coat or gel coat to the spinning mold. This provides the tank with its desired color and the distinctive exterior finish.

The backbone of the tank, the structural wall and corrosion barrier, is constructed next by combining chemical resistant resin with chopped strand "E" glass for strength. Chopped glass has been selected to minimize potential wicking problems sometimes associated with other reinforcements. The resin saturated chopped strand reinforcement is sprayed into the mold in layers and then rolled to remove trapped air bubbles to insure a dense uniform laminate. This process is then repeated with each additional resin/ glass layer to meet the design wall thickness.
(A)

A 10-15 mil layer of pure or pigmented resin is applied to the mold surface.

B Chopped " $E$ " glass is added to meet design thickness.

C 7-10 mils of pure resin is applied to the inside surface.

Color is applied by spraying gel coat into the mold.

## CENTRIFUGAL CASTING - THE PROCESS

## SPECIFICATIONS:

Centrifugally cast tanks manufactured by Design Tanks are designed to meet or exceed the strength requirements of ASTM D4097-01.

Standard catalog tanks are built to hold liquid with a specific gravity of 1.3 at a safety factor of not less than $10: 1$. Tanks designed to hold heavier materials are available upon request. Contact the factory for specific requirements.

Centrifugally cast tanks can be manufactured for food grade applications depending upon resin selection.

In tanks 24" through 48" diameter, the entire wall is constructed from a single resin system throughout. Larger diameter tanks ( 60 " through 90 " diameter) feature the additional flexibility of manufacturing with a dual resin system to achieve a high quality tank at an economical price.

Upon completion of the wall, the inside surface is coated with 7 to 10 mils of pure resin to give the interior of the tank a smooth corrosion-resistant barrier. In highly corrosive applications, such as the storage of caustic materials, a layer of synthetic veil is added before the final resin coat to provide further resistance to chemical attack.

After curing in the mold, the tank is removed by air pressure, checked for quality and sent to the final assembly area for the installation of accessories. Centrifugally cast tanks are available in several sizes and styles. Each can be constructed from a number of resin systems to meet specific chemical and temperature requirements. Refer to resin selection guide to determine material compatibility.

## PROPERTIES (MINIMUM)

Tensile strength (PSI) ......................... 14,000 ASTM D638-96
Tensile modulus (PSI) ......................800,000 ASTM D638-96
Compressive strength (PSI)............... 18,000 ASTM D695-96
Coefficient of thermal expansion
(in./in. $/{ }^{\circ} \mathrm{F} \times 10-6$ ). $\qquad$ 12 ASTM D-696-91
Flexural modulus (PSI). $\qquad$ 600,000 ASTM D790-96a

Flexural strength (PSI)
19,000 ASTM D790-96a

Resin and chopped glass is sprayed into the revolving mold.

Once cured, the finished product is removed from mold.

## CENTRIFUGALLY CAST HORIZONTAL FIBERGLASS TANKS

Horizontal fiberglass
tanks can be designed for
either stationary storage or non/D.O.T. regulated
mobile applications. Tanks
must be properly supported during use.

## - Baffles are recommended for mobile applications whenever the tank length to diameter ratio exceeds 1.5.

NOTES:

1) Tanks are designed for atmospheric pressure only and must be vented! Follow vent specifications.
2) Centrifugal cast tanks provide the superior chemical resistance capability of a high resin-to-glass ratio wall construction, and the most aesthetically pleasing exterior appearance in the industry.

All horizontal tanks must be properly supported either by Design Tank saddles or customer supplied saddles that have been approved by engineering. To insure adequate support, follow guidelines for saddle spacing that are provided on this page.

NOTE: Failure to comply with support requirements may void warranty.

$X=$ measurement from outside edges of saddles. Additional saddles must be equally spaced between outside pair.

## BAFFLES AND BULKHEADS FOR HORIZONTAL FIBERGLASS TANKS

Baffles and bulkheads are con-structed of chemical-resistant FRP resin and bonded permanently to the interior of the tank wall. Baffles and bulkhead are available in tank diameters 24 " through 90 ".

BAFFLES
Partial flow-through baffles eliminate excessive shifting of liquid in mobile applications.

## BULKHEADS

Bulkheads divide horizontal tanks into compartments allowing the storage of more than one chemical.

## FRP SUMPS FOR COMPLETE DRAINAGE OF HORIZONTAL TANKS

Baffles and bulkheads are con-structed of chemical-resistant FRP resin and bonded permanently to the interior of the tank wall. Baffles and bulkhead are available in tank diameters 24 " through 90 ".

| SUMP SIZE (IN.) |
| :---: |
| $10 \times 10 \times 6$ |
| $4 \times 4 \times 2$ |

**For tanks 42" diameter \& larger.

Sumps will accept either bulkhead fittings or fiberglass couplings.
FRP sumps can be factory installed on any horizontal fiberglass tank to provide nearly complete drainage.

SADDLES

## STANDARD SADDLE ASSEMBLIES

Standard steel saddles provide complete support for horizontal fiberglass tanks when guidelines are followed.

- Standard saddles feature minimum clearance between the tank bottom and floor.
- Saddles are supplied epoxy white.
- SS straps hold tank to saddle.
- Standard saddles are intended for mobile applications.
- Custom saddles for large tanks are also available upon request.

## SADDLES

INDUSTRIAL SADDLE ASSEMBLIES
Industrial saddle assemblies feature an 8 " clearance
between the bottom of the tank and the
floor and are recommended for support of horizontal tanks when plumbing access to a
bottom drain fitting is required. When ordering, please specify either standard or industrial
saddles. If no part number is called out, standard saddles will be shipped.

- Industrial saddles are epoxy white.
- Stainless steel straps and bolts are provided. Epoxy white straps on 72".
- Heavy duty foam rubber pad is included with the saddle.
- Industrial saddles are not intended for mobile applications.

## SADDLES

## SADDLES - 90" DIAMETER TANKS

Epoxy white heavy duty steel saddles for 90 " diameter horizontal tanks feature 10 " of clearance from bottom of tank to ground.

- 90" diameter horizontal tanks are designed to be supported by no more than 2 saddles.
- Saddle assembly provides contact with 120 degrees of tank sidewall to insure proper support.
- Customer must provide adequate concrete pad footings for saddle.
- Engineering recommendations are available for specific applications.

## FLAT BOTTOM OPEN TOP

CENTRIFUGALLY CAST FLAT
BOTTOM, OPEN TOP
FIBERGLASS TANKS
Available in capacities to 6000 gallons, flat bottom open top tanks provide economical storage for a wide range of chemicals depending upon resin selection.

- Covers are not included.

See chart on next page for options.

*90" covers bolt down to an external flanged lip. Cover is not designed for loads and must be vented!
*90" diameter tanks include an external flanged lip measuring $2 \mathbf{3 / 4}$ " wide and 1/2" thick. Actual outside diameter of open top 90 " tanks is 95 1/2"
*90" diameter tanks 2000 gallon and below, have two lifting lugs. All other 90 " tanks have three lugs included.

## DISHED BOTTOM OPEN TOP

CENTRIFUGALLY CAST DISHED BOTTOM, OPEN TOP FIBERGLASS TANKS

Supported by an extension of the sidewall, our dished bottom tanks allow for complete drainage and easy cleaning. This style features a 6 " minimum clearance from bottom of the dish to floor to provide convenient access to plumbing through 5" radius scallop in the sidewall. (Standard clearance on 72 " diameter tanks is 12 ".)

## DISHED BOTTOM OPEN TOP

## 90" DIAMETER DISHED BOTTOM, OPEN TOP WITH LEG RING

"90 diameter open top tanks include an external flanged lip and are supported by (4) 4" steel pipe legs threaded into a fiberglass encapsulated leg ring. Legs are not included with the tank and must be ordered separately.

1/2" thick external lip extends 2 3/4" outside tank wall.

Leg length required for 0 " clearance is $185 / 8$ ".

- Seismic Zone design requires special consideration. Contact Engineering for full assistance.

| TOTAL <br> CAPACITY <br> (GAL.) | DIAMETER <br> X HEIGHT <br> (IN.) | APPROX. <br> WALL. |  |

| 1000 | $90 \times 47$ | THICKNESS <br> (IN.) | APPROX. <br> WEIGHT <br> (LBS.) |
| 1500 | $90 \times 65$ | $3 / 16$ | $8 / 16$ |

NOTE: 90" diameter tanks $\mathbf{2 0 0 0}$ gallon and below, have two lifting lugs.
All other 90" tanks have three lugs included.

## FLAT BOTTOM ANNULAR DOMED TOP

CENTRIFUGALLY CAST FLAT BOTTOM, ANNULAR DOMED TOP FIBERGLASS TANKS

Flat Bottom Annular Dome Top Tanks are totally enclosed and are designed for chemical and water storage applications requiring a dust-free environment.

- Annular head configuration allows for easy fitting installation

## NOTES:

1) Enclosed tanks are designed for atmospheric pressure only and must be vented!
2) 90 " diameter tanks 2000 gallon and below, have two lifting lugs. All other 90" tanks have three lugs included.

## DISHED BOTTOM ANNULAR DOMED TOP

CENTRIFUGALLY CAST DISHED BOTTOM, ANNULAR DOMED TOP FIBERGLASS TANKS

Totally enclosed tank features a dished bottom for easy cleanout and complete drainage. The 6"clearance (12" on 72" diameter tanks) provides easy access to plumbing through a 5 " radius scallop cut in sidewall.

- Annular head configuration allows for easy fitting installation.

NOTE: Enclosed tanks are designed for atmospheric pressure only and must be vented!

## DISHED BOTTOM ANNULAR DOMED TOP

90" DIAMETER DISHED BOTTOM, ANNULAR DOMED TOP WITH LEG RING

$90 "$ diameter tanks are supported by (4) 4" steel pipe legs threaded into a fiberglass encapsulated steel leg ring. Legs are not included with the tank and must be ordered separately.

Height shown is for tank only.

Leg length required for 0 " clearance is $185 / 8^{\prime \prime}$.

Seismic Zone design requires special consideration. Contact Engineering for full assistance.

## CONSTRUCTION NOTES:

$30^{\circ}$ Cone bottom skirted tanks are supported by an extension of the sidewall and feature one 5 " radius scallop for plumbing access. Larger scallops are available upon request.

Standard clearance from the bottom of the cone to the floor is 12 ". Clearances to meet specific customer requirements are available at no additional cost but must be specified at the time of the order.

Tanks are supplied in natural resin color or a pigmented color based on need.

## $30^{\circ}$ CONE BOTTOM WITH LEG RING

$30^{\circ}$ CONE BOTTOM W/LEG RING, OPEN TOP

Open top leg ring tanks include a flanged lip and FRP encapsulated steel leg ring. Legs are not included and must be ordered separately.

Tanks are supplied in natural resin color. Specific color options are available at additional cost.

- Seismic Zone design requires special consideration.

Contact Engineering for full assistance.

## $45^{\circ}$ CONE BOTTOM, FLAT TOP

$45^{\circ}$ CONE BOTTOM, FLAT TOP

Open top leg ring tanks include a flanged lip and FRP encapsulated steel leg ring. Legs are not included and must be ordered separately.

Tanks are supplied in natural resin color. Specific color options are available at additional cost.

- Seismic Zone design requires special consideration. Contact Engineering for full assistance.

## MIX TANKS

## MIX TANKS

The Mix Tank line was developed to meet the more stringent performance requirements of industrial mixing applications.

Offered in three styles, this series of tanks is a heavy-walled version of the standard line and features an external flanged lip which can accommodate mixers weighing up to 250 pounds.

## FLAT BOTTOM

flanged lip included.

Heavy duty flat bottom mix tanks are ideal for applications where complete drainage is not critical.

- Hold down lugs are recommended for mixing applications.
- Vinylester resin tanks are natural in color.

## MIX TANKS

## DISH BOTTOM W/LEG RING

## flanged lip included.

Dished bottom leg ring tanks are designed to achieve complete bottom access and maximum floor clearance. Legs are not included and must be ordered separately. See below for details.

- For best results, legs should be anchored to the floor. Maximum length $=48$ ".
- Vinylester resin tanks are natural in color.

Steel coupling is welded to fiberglass encapsulated steel leg ring.

Pipe leg threads into steel flange pad.
Pads can be bolted to the floor for stability.

## - Seismic Zone design requires special consideration.

## STEEL PIPE LEGS

Legs must be ordered separately on all leg ring tanks and can either be factory or customer supplied. If legs are to be customer supplied refer to specific tank to determine correct pipe size. All centrifugally cast tanks require four (4) pipe legs.

Legs available are primed steel pipe with NPT threads on both ends and are designed to fit into steel couplings welded onto a fiberglass encapsulated steel leg ring. Lower portion of leg threads into a primed steel flange pad with ASA 150\# bolting geometry.

When ordering legs refer to specific tank part number and add the amount shown for 0 " clearance to the amount that you require between the bottom of the tank and the floor.

For example to get 12 " of clearance on a M7486 (shown above) you would add 12" to a 0 " clearance of 12 1/4". Proper leg length would be 24 1/4".

DESIGN TANKS

## SECTIONALIZED TANKS

## CENTRIFUGALLY

CAST SECTIONALIZED FIBERGLASS TANKS

Our unique sectionalized fiberglass tank provides an excellent option for retrofit applications such as solar energy storage and domestic fire protection systems.

- Modular design allows for storage up to 800 gallons with a tank capable of passing through a 30" door.
- Factory pre-sanded sections can be assembled on site with no special equipment or training.
- Tanks include adhesive kit and installation instructions.
- Sectionalized tanks are not recommended for the storage of highly aggressive chemicals or for use in food grade applications.
- Available in either isophthalic polyester or vinylester resins.

| DIA. X HT. <br> (IN.) | TOTAL CAPACITY (GALS.) | TOTAL SECTIONS | APPROX. WEIGHT (LBS.) | APPROX THICK. (IN.) |
| :---: | :---: | :---: | :---: | :---: |
| $42 \times 29$ | 150 | 1 | 75 | 5/32 |
| $42 \times 55$ | 300 | 2 | 107 | 5/32 |
| $42 \times 81$ | 450 | 3 | 139 | 5/32 |

| $48 \times 107$ | 800 | 4 | 209 | 5/32 |

## SECTIONALIZED TANKS

INSTALLATION INSTRUCTIONS

Clean both factory pre-sanded bonding surfaces with MEK or acetone to insure positive seal.

Butter bonding surfaces on spigot joint (base) and bell portion (top) with material, making sure all pre-sanded surfaces are evenly covered.

Mix vinylester adhesive per instructions enclosed with kit.

Slip top half of tank smoothly over the base until seams meet.

Strip off excessive adhesive on both outside and inside seams with wooden paddle and wipe off seams with a solvent soaked cloth to produce smooth appearing seams. Tank should be allowed to cure overnight and be water tested before being put into service.

## CAPACITY AND DIMENSION CHARTS

CAUTION! The following chart is intended to be used as a guide only. Variations in mold taper and head preparation will affect actual dimensions. For applications requiring strict tolerances contact the factory for details.

|  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| DIAMETER | SIDEWALL GAL/INCH | DOME CAP (GALLONS) | 0" CLEARANCE LEG LENGTH | FLAT CAP (GALLONS) | $\stackrel{\text { LIP }}{\text { HT. (IN.) }}$ |
| 8 | 31.3 | 427 | 20 | 248 | $\begin{gathered} 8^{*} \\ 8 \end{gathered}$ |
| 10' | 48.9 | 833 | 25 | 389 | $\begin{aligned} & 8 \\ & 9 \end{aligned}$ |

*NOTE: The $8^{\prime}$ is also available in an external flange lip. Height of the external lip is 6". Capacity of the external 8 ' lip is 235 gallons.

## CAPACITY AND DIMENSION CHARTS

CAUTION! The following chart is intended to be used as a guide only. Variations in mold taper and head preparation will affect actual dimensions. For applications requiring strict tolerances contact the factory for details.

## CHOP-HOOP FILAMENT WINDING

is a unique blend of two proven fabrication techniques: chopped glass spray-up and continuous filament winding. This combination provides the benefits of maximum corrosion resistance plus the strength required for vertical storage.

The chop-hoop filament wound tank is produced over a smooth male mandrel in four automated steps:

1. The bottom head is produced in a separate spray-up process and affixed to the mandrel. A resin rich inner surface is applied to the mandrel and reinforced either with a glass veil or a synthetic veil (Nexus®) in those applications requiring maximum chemical resistance. This layer is a minimum of 10 mils thick with a glass/resin ratio of approximately 20/80.
2. The interior corrosion barrier is constructed next by combining resin with chopped "E" glass in two 45 mil passes for agriculture and 3 for industrial. Total thickness is a minimum of 90 mils with an approximate glass/ resin ratio of $30 / 70$.
3. The structural wall is produced using a process of simultaneous glass chopping, resin spraying, and hoop filament winding. The glass/resin ratio is approximately $50 / 50$ with the glass roving (filament) providing the required hoop strength. The thickness of the structural wall is varied according to tank height, application, and specific gravity of the contents.
4. Finally, a 5 mil resin coat or a 45 mil exterior corrosion barrier is added depending upon projected service. The exterior corrosion barrier consists of a layer of resin and chopped "E" glass strand applied in an approximate resin to glass ratio of 70/30.

## SPECIFICATIONS

Using chop-hoop filament wound fabrication, fiberglass reinforced plastic tank walls manufactured by Design Tanks meet or exceed the design criteria of ASTM D 3299-00.

Our standard storage vessels are designed for liquids with a specific gravity of up to 1.3. Tanks designed to hold heavier materials are available upon request.

Chop-hoop filament wound tanks can be manufactured for food grade applications depending on resin selection.

An interior corrosion barrier is fabricated by spraying a chopped roving glass and resin mixture.

Structural wall is constructed by simultaneous glass chopping, resin spraying and hoop filament winding.

TYPICAL PROPERTIES

| Hoop Direction |  |
| :--- | ---: |
| Tensile Strength PSI | 42,000 |

| Flexural Modulus PSI | $1,330,000$ |

Chop-Hoop Filament Winding storage tank.

## FLAT BOTTOM OPEN TOP

CHOP-HOOP FILAMENT WOUND, FLAT BOTTOM, OPEN TOP FIBERGLASS TANKS

- 8' diameter open top tanks include external flanged lips. 9', 10', 12' and 14' dimensions tanks are suppllied with internal flange lips. See drawing below for dimensions.
- Standard tank is designed for 1.3 specific gravity material. 1.8 and 2.1 versions are available upon request.
- All filament wound tanks include lift lugs.

## 8' diameter - open top

NOTE: Tank bottom must be fully supported and pad must remain level within 1/8" over a ten foot span.

- Consult a local engineer for specific site requirements.
- Seismic Zone design requires special consideration. Contact Engineering for full assistance.

## FLAT BOTTOM DOMED TOP

## CHOP-HOOP FILAMENT WOUND FLAT BOTTOM, DOMED TOP FIBERGLASS TANKS

- Domed top tanks are designed for atmospheric pressure only and must be vented.
- Standard tank designed for 1.3 specific gravity material. 1.8 and 2.1 versions are available upon request.
- All filament wound tanks include lift lugs.
- Seismic Zone design requires special consideration. Contact Plastics Engineering for full assistance.

NOTE: Tank bottom must be fully supported and pad must remain level within 1/8" over a ten foot span. Consult a local engineer for specific site requirements.

| :---: | :---: | :---: | :---: |
| 8'0' | 31.3 | 498 | $35 "$ |
| 9'0' | 39.6 | 723 | 39" |
| 10'0' | 48.9 | 921 | 42" |

## Steel pipe legs

$30^{\circ}$ cone bottom tanks are supported by steel pipe legs threaded into a fiberglass encapsulated steel leg ring. Legs must be ordered separately.

## LEG ORDERING INFORMATION

To order legs, specify number required and overall length. Overall length is determined by adding amount of leg for 0 " clearance (shown above) to desired clearance between the bottom of the cone and the floor.
(NOTE: Design Tanks recommends that clearance not exceed 24" unless specific application has been reviewed by the factory.)

EXAMPLE: Legs for an 8 ' diameter 6000 gallon tank with a 24 " clearance from bottom of cone to the floor would be ordered as follows:

Number of legs required $=4$
Leg length $=0$ " clearance

+ required clearance

$$
34 "+24 "
$$

Correct order would be (4) 58 " tall legs.

## $45^{\circ}$ CONE BOTTOM

## LEG ORDERING INFORMATION

To order legs, specify number required and overall length. Overall length is determined by adding amount of leg for 0 " clearance (shown above) to desired clearance between the bottom of the dish and the floor.
(NOTE: We recommend that clearance not exceed 24 " unless specific application has been reviewed by the factory.)

EXAMPLE: Legs for an 8' diameter 6000 gallon tank with a 24 " clearance from bottom of dish to the floor would be ordered as follows:

Number of legs required $=4$

$$
\begin{gathered}
\text { Leg length }=0 \text { " clearance } \\
+ \text { required clearance } \\
20 "+24 "
\end{gathered}
$$

Correct order would be (4) 44 " tall legs.

## BRINEMAKER TANKS

## BRINEMAKER

Brinemakers allow Companies to leverage the benefits of saturated brine. In addition to obvious bulk salt advantage, consistency of product, and meeting "peak-demand" requirements, companies quickly recognize increased warehouse space and decreased work related injuries due to personnel handling individual salt bags.

[^0]
## SALT FACTS:

## Southern Rock (44\% void volume)

- Maximum brine making rate
- 10'-0" diameter tank-20GPM
- 12'-0" diameter tank-25 GPM
- Weight per foot of tank height
- 10'-0" diameter tank-2.7 ton
- 12'-0"' diameter tank-3.8 ton

## Vacuum Granulated ( $40 \%$ void volume)

- Maximum brine making rate
- 10'-0" diameter tank-40 GPM
- 12'-0" diameter tank-50 GPM
- Weight per foot of tank height
-10'-0" diameter tank-3.0 ton
-12'-0" diameter tank-4.2 ton

## FACTS/SIZES

- At $77{ }^{\circ} \mathrm{F}$ degrees Fahrenheit one gallon of saturated brine weighs 9.98 pounds and contains 2.642 pounds of salt.
- At $77^{\circ} \mathrm{F}$ one gallon of water will produce 1.138 gallons of saturated brine and dissolve 3.006 pounds of salt.
- Brinemakers are typically made in diameters ranging from 8 ' to 12 ', but can be designed to fit any size required.

## ACCESSORIES

## FRP FLANGED LIPS

Fiberglass flanged lips are included as standard equipment on all Mix Tanks and are also available as an option on other open top tanks. Constructed from the same resin as the tank corrosion barrier, reinforced lips add rigidity to the top and allow for the use of bolt-down covers.

- Lips are constructed as an integral part of the tank wall.
- Lip is supplied without bolting holes unless otherwise specified.

| A <br> DIA. <br> (IN.) | B <br> DIM. <br> (IN.) | DIM. <br> (IN.) |
| :---: | :---: | :---: |
| 24 | 2 | $3 / 8$ |
| 30 | 2 | $3 / 8$ |
| 32 | 2 | $3 / 8$ |
| 38 | 2 | $3 / 8$ |
| 42 | 2 | $3 / 8$ |
| 48 | 2 | $3 / 8$ |
| 60 | $21 / 4$ | $3 / 8$ |
| 72 | $23 / 4$ | $1 / 2$ |
| 90 | $21 / 2$ | $1 / 2$ |
| 96 |  | $1 / 2$ |

## ACCESSORIES

## BOLT DOWN COVERS

Fiberglass bolt-down covers are designed for use with mix tanks or standard open top tanks that have flanged lips. When ordered in conjunction with a tank, cover and flanged lip will be matchdrilled. If ordered as a replacement item, cover will be supplied without holes in order that customer can field drill.

Solid Covers available either plain or with an 8 " x 8 " mixer shaft cutout.

Hinged Covers split with 304 stainless steel hinge to provide easy access to the tank interior. 24" - 72" diameter tanks feature a center split with $11 / 2$ " wide hinge. 90 " \& 8' diameter tanks are split at $1 / 4$ of tank diameter and have a 3 " wide stainless hinge. 8 ' hinge and solid covers are reinforced to take 350 lb . load.

Hinged covers are available plain, with an 8 " $\times 8$ " shaft cutout, or with a 1 " thick FRP encapsulated pad for mixer mount.

## ACCESSORIES

## MIXER BARS

Mixer bars for open top tanks 60" diameter and smaller consist of 2" x 4" rectangular fiberglass tubing with wood cores. Bars are designed to hold mixers weighing up to 125 pounds and are secured to flanged lip with stainless bolts.

## AGITATOR SUPPORTS

90" diameter tanks utilize a primed carbon steel agitator support constructed from two $6 " \times 8.2 \mathrm{lb} . / \mathrm{ft}$. channels and feature a 15 " square mounting plate. Agitator supports designed to be used on an annular domed top tank require four (4) steel legs for clearance. When ordering include part numbers for support and legs.

Supports for 72" diameter tanks are constructed from two 4" x 7.25 $\mathrm{lb} . / \mathrm{ft}$. channels and feature a 12 " square mounting plate.

Engineering assistance is available from the factory to meet custom applications and for larger tanks or special installations.

## *legs required only

 on domed top tanks.
## 24" - 60" Diameter

72" and 90" Diameter

DESIGN

## ANTI-VORTEX BAFFLES

Fiberglass anti-vortex baffles minimize problems associated with vortexing during agitation.

- Flat plate baffles are positioned to oppose agitation direction specified by customer.
- For best results four baffles are recommended per tank.
- Baffles are attached to tank by fiberglass gussets permanently bonded to sidewall.

## ORDERING GUIDELINES

- When ordering specify number of baffles per tank, length of each baffle, and number of gussets per baffle.
- Typical baffle length will equal sidewall length minus 3" for 32"-72", sidewall length minus 6" for 90" diameter.
-Top and bottom gussets should be located within 3"- 6" of end of baffles. Distance between gussets should not exceed 60".

| *Tank <br> Dia. | Baffle <br> Width <br> A | Baffle <br> Thick. <br> B | Baffle <br> Thick. <br> B |
| :---: | :---: | :---: | :---: |
| 32 | 3 | $1 / 4$ | $1 / 4$ |
| 38 | 3 | $1 / 4$ | $1 / 4$ |
| 42 | 4 | $1 / 4$ | $1 / 4$ |
| 48 | 4 | $3 / 8$ | $1 / 4$ |
| 60 | 6 | $3 / 8$ | $3 / 8$ |
| 72 | 8 | $3 / 8$ | $3 / 8$ |
| 90 |  |  | $3 / 8$ |

## FLANGED CONNECTIONS

## FLANGED CONNECTIONS

Hand lay-up vinylester flanges with stub pipe are available in sizes from 1" to 24 " and are permanently bonded to the tank. Flanges can be located either above or below liquid level and can be ordered in three different styles based upon intended use.

- Gaskets, bolts, washers, and nuts are not included with flanges. We recommend the use of a 40 to 60 durometer full faced gasket, 1/8" thick, and a maximum bolt take up torque of 30 ft .-lbs.
- Flange face is 150 lb . A.S.A. bolting geometry.
- Sidewall mounted flanges protrude inside tank a minimum of 1 " as shown. Bottom flanges are flush mounted unless otherwise specified.

NOTE: Bonding area equals three times the nominal pipe size on all pipe through 8". On 10" through 24", patch diameter is 16 " larger than pipe size.

| PIPE SIZE (IN.) | A DIM. <br> (IN.) | B DIM. <br> (IN.) | C DIM. <br> (IN.) | D DIM. <br> (IN.) | E DIM. <br> (IN.) | NO. OF HOLES |

| $24^{*}$ | 32 1/2 | $291 / 2$ | 1 | $11 / 8$ | 9 | 20 |

* Flange must include appropriate blind flange if used as below liquid level access.

Larger sizes available upon request.

Non-Gusseted Flanges

Blade-Gusseted Flanges

Conically-Gusseted Flanges

## FLANGED CONNECTIONS

NON-GUSSETED FLANGES

Non-gusseted flanges through 8" pipe size are designed for light duty, nonweight bearing applications on tanks 72" diameter or smaller. We recommend the use of gusseted flanges on all tanks 90" diameter and larger.

## BLADE-GUSSETED FLANGES

Blade gusseted flanges are reinforced by flat fiberglass plates bonded the full length of the flange assembly. They are recommended for heavy-duty applications where ease of access to the back of the flange face is important.

CONICALLY-GUSSETED FLANGES

Conically gusseted flanges are reinforced by a fiberglass bonded cone and are recommended for applications where maximum strength is required.

## FLANGED CONNECTIONS

## SIPHON DRAIN FLANGES

| PIPE SIZE (IN.) | A DIM. (IN.) | B DIM. (IN.) | C DIM. (IN.) | D DIM. (IN.) | E DIM. <br> (IN.) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $11 / 2$ | $51 / 2$ | $37 / 8$ | 5/8 | 11/16 | 6 | 4 |
| 2 | $61 / 2$ | $43 / 4$ | 3/4 | 11/16 | 4 | 4 |
| 3 | 8 | 6 | 3/4 | 13/16 | 4 | 4 |
| 4 | $91 / 2$ | 7 1/2 | 3/4 | 15/16 | 4 | 8 |
| 6 | 11 1/2 | $91 / 2$ | 7/8 | 7/8 | 4 | 8 |
| 8 | 14 | $113 / 4$ | 7/8 | 1 | 6 | 8 |

*NOTE: Bolts are not included with flanges unless a blind flange is also ordered. Column listing number of bolt holes and size refers to maximum size that flange will accommodate and does not necessarily reflect standard installation.

Available either non-gusseted (shown above) or gusseted, siphon drain clearance may vary depending on size and customer needs.

## FLANGED CONNECTIONS

## SIDE BOTTOM DRAIN FLANGES

Foundation pad must be notched to accommodate flange.
Refer to chart for dimensions. "W" based on tank edge placement.

Side bottom drains extend below the tank bottom to provide nearly complete drainage of flat bottom tanks. Must be gusseted.

## FLANGED CONNECTIONS

## BLIND FLANGES (LARGER SIZES AVAILABLE UPON REQUEST)

NOTE: All blind flanges are installed with full face gaskets, and stainless steel bolts, nuts, and washers. Bolting hardware supplied for all sizes. Chemical compatability determines gasket material, 1/8" thickness is standard.

Blind flanges provide a sealed cap for flanges that are not currently plumbed to.

## COUPLINGS

## FULL AND HALF FRP COUPLINGS

| PIPE SIZE <br> (IN.) | FULL OR HALF OD (IN.) | FULL OR HALF DIM. A ( $\mathrm{IN}_{\mathrm{N}}$ ) | FULL DIM. <br> B (IN.) | HALF DIM. <br> D (IN.) |
| :---: | :---: | :---: | :---: | :---: |
| 1/2 | $11 / 4$ | 4 | 8 | 4 |
| 3/4 | $15 / 8$ | 5 | 8 | 4 |
| 1 | $17 / 8$ | 6 | 8 | 4 |
| $11 / 2$ | 2 1/2 | 8 | 8 | 4 |
| 2 | 3 | 9 | 8 | 4 |
| $21 / 2$ | $33 / 8$ | 10 | 8 | 4 |
| 3 | $43 / 8$ | 13 | 8 | 4 |
| 4 | 5 | 15 | 8 | 4 |
| 6 | $71 / 4$ | 20 | 8 | 4 |

Fiberglass female pipe threaded couplings are bonded permanently into the tank to eliminate potential leak problems. Full and half couplings are available in sizes from $1 / 2^{\prime \prime}$ to 6 " and can be located anywhere on the tank except the saddle assembly contact area on horizontal fiberglass tanks.

- Manufactured from corrosion-resistant vinyl ester resin.
- Outside bonding area at the coupling is equal to or greater than tank wall thickness.
- Inside surface is sealed with 2 layers of 2 oz . glass mat and the same resin as the tank wall on all tanks 60 " diameter and larger. On smaller diameters inside sealing may not be possible unless tank is equipped with a manway.
- All side wall penetrations protrude as shown unless otherwise specified.
- Bottom fittings are flush mounted for complete drainage.
- Full couplings provide for internal piping. Please specify either full or half when ordering.
- $11 / 2^{\prime \prime}$ minimum edge to edge of couplings.
- 2 " minimum edge to bottom of tank.

FIBERGLASS TANK BULKHEAD FITTINGS

Design Tanks, LLC. bulkhead fittings for fiberglass tanks feature an expanding grommet (Nitrile or Fluorel) which allows for location on most curved surfaces. Available in either PVC or glass filled polypropylene, bulkhead connections provide an economical option for tank penetrations on fiberglass tanks 48 " diameter or less. Bonded in couplings are recommended for larger sizes. Before ordering, please consult corrosion guide to determine selection of fitting and grommet material.

## INSTALLATION INSTRUCTIONS - FIBERGLASS TANKS

Use a standard hole saw that fits any $1 / 4$ " electric drill motor to cut the proper size hole in the fiberglass tank $21 / 8^{\prime \prime}$ hole is required for $1 / 2^{\prime \prime}, 3 / 4^{\prime \prime}$ and $1^{\prime \prime}$ threaded fittings. A $31 / 4^{\prime \prime}$ hole saw is required for $11 / 4^{\prime \prime}, 11 / 2^{\prime \prime}$, and 2" bulkhead fittings.

STEP 1 Place your finger through the fitting and install the body in the hole by placing one lug through the hole first. A slight tap with a hammer will slip the second lug through the hole.
STEP 2 Flex the back-up washer through the hole and over the fitting body.
STEP 3 Slip the grommet over the fitting body but do not slide it all the way down the body at this point.
STEP 4 While holding the fitting body with your finger, work the grommet down the fitting body until it is in the hole in the tank wall. (The grommet will protrude slightly on both the inside and outside of the tank.)
STEP 5 Place the washer on the fitting, then install the nut. Tighten until snug. (Note that nut is left hand thread!)
Sealing is accomplished by the grommet expanding against the circumference of the hole you cut in the tank.

## VENTS AND VENTING SPECIFICATIONS

## FRP MUSHROOM VENTS

| PIPE SIZE (IN.) | A (IN.) | B (IN.) |
| :---: | :---: | :---: |
| 2 | $77 / 8$ | $15 / 8$ |
| 4 | $91 / 8$ | $23 / 4$ |
| 8 | $111 / 8$ | $43 / 4$ |

- Mushroom vents are constructed from corrosion-resistant vinylester resin and are permanently bonded directly to the top of the tank.
- Vent screen to keep out birds and bugs is available upon request. Use of a screen reduces vent capacity. Please contact the factory for recommendations and pricing.

FRP U-VENTS 2", 3", 4"

| PIPE SIZE (IN.) | D (IN.) | H (IN.) |
| :---: | :---: | :---: |
| 2 | 9 | 12 |
| 3 | 13 | 14 |
| 4 | 15 | 16 |

[^1]
## DOWN PIPES, BAFFLES, \& GUSSETS

## FIBERGLASS DOWNPIPES

- Fiberglass downpipes are designed for either exterior or interior installation and are used for foam reduction, control of flow, and as a siphon drain.
- Standard installation features pipe permanently bonded to tank wall utilizing fiberglass brace supports. Maximum distance between supports is 60 ".
- External pipe support is provided using mounting lugs.

## DOWN PIPES, BAFFLES, \& GUSSETS

## AGITATION BAFFLES

- Fiberglass baffles are designed to reduce vortexing in mixing applications.
- Flat plate baffles are bonded to tank wall utilizing fiberglass gussets. See drawing at left for baffle dimensions.
- Top and bottom gussets should be located within 3-6" of end of baffles. Distance between gussets should not exceed 60".

## FILLWELLS \& MANWAYS

8", 12 ", 16 " \& 22" FILLWELLS AND COVERS (ABOVE LIQUID LEVEL)

| DESCRIPTION |
| :--- |
| Installed Fillwell |
| Cover Assembley |
| Replacement Fillwell |
| Replacement Center Cap |
| Pop Rivets (8) |

NOTE: Must be installed in flat surface.

Polypropylene threaded fillwells feature large precision threads and are ideal for when inside access is required.

## HINGED QUICK ACCESS MANWAYS (ABOVE LIQUID LEVEL) - 18" AND 24 "

Available in either 18 " or 24 " diameter, hinged quick access manways provide quick and easy access to fiberglass tanks for above liquid level service.

## FILLWELLS \& MANWAYS

BOLT DOWN MANWAYS (ABOVE LIQUID LEVEL) - 24" AND 32"

| DIAMETER | NO. BOLTS | $\mathbf{X}($ IN. $)$ |
| :---: | :---: | :---: |
| 24 | 8 | $285 / 16$ |
| 32 | 8 | $361 / 4$ |

Caution: Tank must be vented to atmosphere when manway is installed.
Available in either 24 " or 32 " size, the bolt down manway features a $3 / 8$ " thick FRP cover fastened to a $3 / 8$ " flanged lip and can be located anywhere above liquid level that does not interfere with a head seam.

## HOLD DOWN LUGS

## LIGHT DUTY STEEL HOLD DOWN LUGS

Light duty hold down lugs are designed to provide stability for fiberglass tanks 48" diameter and smaller.

- Available in galvanized steel or in 304 and 316 stainless steel for more corrosive environments.
- Lugs are bonded permantently to tank wall and are intended to be bolted into a concrete mounting pad. Anchor bolts should be located after tank has been placed on pad (bolts not included).

## HEAVY DUTY STEEL HOLD DOWN LUGS

Heavy duty steel hold down lugs are designed for use with tanks 60" diameter or larger where there are seismic, mixing, or wind loading concerns. For specific seismic zone information contact the factory.

- Available in galvanized steel, or in 304 and 316 stainless steel.

## EXTRA HEAVY DUTY TIE DOWN

Heavy duty dogs and fiberglass molded load ledge for applications involving high winds or seismic zone 3 or 4. Galvanized carbon steel is standard, for special applications 304 and 316 stainless steel can be purchased.

## LIFT LUGS \& MOUNTING LUGS

## LIFT LUGS

Lift lugs provide a safe, economical means to lift empty fiberglass tanks for on-site handling.

- Lift lugs are required on all tanks 90" diameter and larger.
- Lugs are attached to tank wall with hand-layed laminate equal to or greater than the tank wall thickness.
- Lugs are available in 304 or 316 stainless steel.

## HEAVY DUTY LIFT LUGS

Heavy duty lugs are required on all tanks 90" diameter and larger and are included with the tank. Refer to specific tank size on separate price sheet to determine number of lugs that are included as a standard. Additional lugs are available as an option.

## LIGHT DUTY LIFT LUGS

Light duty lugs are designed to be used on fiberglass tanks 72" diameter and less.

## LIFT LUGS \& MOUNTING LUGS

## FOAMED TANK LIFT LUGS

Lift lugs for polyurethane insulated tanks feature additional height to compensate for 2 " foam thickness. Typical installation would consist of:
1 SIDEWALL LIFT LUG near the bottom.
3 KNUCKLE LIFT LUGS at the top. Refer to drawings on this page for detail.

## Sidewall Lift Lug Insulated Tank

## MOUNTING LUGS

Mounting lugs are available in 304 or 316 SS or fiberglass and are designed to bolt accessories (gauges, level indicators, etc.) to the tank wall.

- Attached to wall with hand-layed laminate equal to or greater than wall thickness.
- May be located on any style tank per customer specifications.

## LADDERS \& CAGES

## LADDERS \& CAGES

## Ladder fall restraint system:

- Standard system includes aluminum rigid rail with clamps to ladder rungs, dismount rail extension, shock absorbing shuttle for the rail to stop falls or slips, and a safety harness.
- Also available in galvanized steel and stainless steel.

To order follow the guidelines listed below:

- Total ladder length $=$ tank height $+3^{\prime} 6 \prime$ '
- Total cage length = ladder length -7 '.
- Maximum center to center distance on mounting lugs is 6'.
- See example on right for assistance.

## HEATING AND INSULATION

## HEATING SYSTEMS

- Heating systems for fiberglass tanks are designed for temperature maintenance only. Sketch above reflects one style of heating system.
- Operate from 120 VAC power source with a low watt/in2 output.
- Enclosed, weatherproof NEMA 4X thermostat operates up to three panels in a parallel circuit.
- To adequately design a system we require tank dimensions, anticipated minimum ambient temperature, wind velocity, and the desired minimum temperature of the contents.
- Alternate heating systems can be designed. In all cases, consult with factory for pricing.

POLYURETHANE INSULATION WITH POLYUREA OVERCOAT

- Spray-on two-part polyurethane foam
- 2.8 pounds per cubic foot density
- R-Value of 6.3 per inch of thickness
- Overcoat consists of a two-part Polyurea material
- Standard top-coat is white or gray and other colors are available upon request
- Materials exhibit excellent weathering characterisitics and great corrosion resistance

## FRP OVERWRAP

## FRP OVERWRAP SPECS

- Insulation with polyisocyanurate foam
- 2 pounds per cubic foot density
- R-value is 5.4-6 per inch of thickness
- Overcoat consists of a FRP laminate material
- Standard top coat color is white or gray and other colors are available upon request
- Materials exhibit excellent weathering characterisitics and great corrosion resistance

## GALLONAGE TAPES

## GALLONAGE TAPES

Tapes are marked in gallons and liters.

Gallonage tapes are available for cataloged vertical and horizontal fiberglass tanks 24 " through 72" diameter and are supplied with black lettering on white adhesive backed tape.

Tapes for 90 " diameter tanks are $31 / 2$ " wide and are supplied with black lettering on white adhesive backed tape.

Tapes for 8' through 14' diameter tanks are marked in 500 gallon and 2000 liter increments and are supplied with black lettering on white adhesive backed tape 8 " wide.

## NOTE:

Due to limited translucency of tank wall, liquid level may be difficult to see in low light environments. We recommend the use of a sight tube assembly for those applications where viewing liquid level is critical.

| TANK DIAMETER | GALLON RANGE | GALLONAGE INCREMENT |
| :---: | :---: | :---: |
| 24-38 | To capacity | 10 |
| 42-48 | To capacity | 20 |
| 60 | To capacity | 50 |

| 12' | 0-26000 | 500 |
| 12 ' | 0-30000 | 500 |

## SIGHT TUBE ASSEMBLIES

PVC SIGHT TUBE ASSEMBLIES

Rigid PVC sight tube assemblies provide a relatively simple and economical method to positively view liquid level in fiberglass tanks. Direct measurement mechanical systems are also available by factory quotation.

Standard assembly is available in either $3 / 4$ " or 1 " size and features one bottom angle valve for emergency shut off. If contents are potentially hazardous, we recommend that a top shut off valve be added as a precaution.

An intermediate support is required when overall sight tube length reaches 10' and one additional support is required for each 6' length thereafter.

PARTS LIST

| ITEM NO. | DESCRIPTION |
| :---: | :--- |
| 1 | Fiberglass Coupling* |
| 2 | PVC Close Nipple |
| 3 | PVC Angle Valve |
| 4 | PVC Male Adapter |
| 5 | PVC Pipe |
| 6 | PVC 90 Elbow |
| 7 | PVC Union, Socket, Socket |

* Coupling bonded into tank. Specify either $3 / 4$ " or 1 " -1 valve or 2 valve.

## EXAMPLES

| SIGHT TUBE LENGTH | NUMBER OF SUPPORTS |
| :---: | :---: |
| $<10^{\prime}$ | 0 |
| $10^{\prime}-17^{\prime} 11^{\prime \prime}$ | 1 |
| $18^{\prime}-23^{\prime} 11^{\prime \prime}$ | 2 |

NOTE: When storing hazardous materials or located (tank) in a high traffic area, an ultrasonic level transmitter is strongly recommended.
